

# MicroJava Quick Reference

(thanks to Sacha Baebler)

## Sample Program

```
program P
final int size = 10;
class Table {
    int[] pos;
    int[] neg;
}
Table val;
{
void main()
int x, i;
{ //----- initialize val -----
val = new Table;
val.pos = new int[size];
val.neg = new int[size];
i = 0;
while (i < size) {
    val.pos[i] = 0; val.neg[i] = 0; i = i + 1;
}
//----- read values -----
read(x);
while (x != 0) {
    if (x > 0)
        val.pos[x] = val.pos[x] + 1;
    else if (x < 0)
        val.neg[-x] = val.neg[-x] + 1;
    read(x);
}
}
```

## Lexical structure

*Character classes:*  
letter = 'a'...'z' | 'A'...'Z'.  
digit = '0'...'9'.  
whiteSpace = ' ' | '\t' | '\r' | '\n'.  
  
*Terminal classes:*  
ident = letter {letter | digit}.  
number = digit {digit}.  
charConst = """ char """. // including '\r', '\t', '\n'  
  
*Keywords:*  
program class  
if else while read print return  
void final new  
  
*Operators:*  
+ - \* / %  
== != > >= < <=  
( ) [ ] { }  
= ; , .  
  
*Comments:* // to the end of line

```
class Token {  
    int kind;      // token code  
    int line;      // token line (for error messages)  
    int col;       // token column (for error messages)  
    int val;       // token value (for number and charCon)  
    String str;   // token string  
}
```

```
class Obj {
